

# Vehicle Defense Systems

**The Archer 1200 Anti-Vehicle Barriers allow for both rapid deployment and facilitate removal should you need to clear a route for emergency vehicles. The design of this heavy duty, ballistic rated, high strength steel barrier allows them to effectively deter vehicle access while remaining small.**

**Safeguard's swing gate and rising gate allow for sturdy control while being adaptable to different site setups.**

**The swing and rising gate booms are reinforced by large anchors on each side. This design allows the gate to open, close and properly latch while providing controlled vehicle access.**

**Concrete Barriers, also known as Jersey Barriers, are often used for traffic control. The design of the concrete structures used by ARX Fencing & Logistics allows for quick deployment by a forklift and provides a solid structure to reinforce the outer perimeter of a site. The barriers cover close to seven feet and weigh up to 2,500lbs.**

AFTER MANY YEARS IN THE SPECIAL EVENT AND PRIVATE SECURITY FIELDS, OUR TEAM HAS GAINED VALUABLE EXPERIENCE PLANNING AND IMPLEMENTING WORLD CLASS EVENTS. EMERGENCY PLANNING HAS BEEN A KEY FACTOR IN THE SUCCESS OF MANY OPERATIONS. WE HAVE HAD THE PRIVILEGE OF WORKING WITH THE NHL, CFL, RCMP, PPS, PMPD AND MANY OTHER HIGH LEVEL GROUPS ALONG WITH LOCAL AND INTERNATIONAL EXPERTS. WE ARE AVAILABLE FOR A CONSULTATION TO HELP DEVELOP A PLAN FOR YOUR NEXT SITE POSTURE.
